## Mandilla Well Project Exploration Update

- **Additional Exploration Licences staked**
- **Geophysical processing and interpretation completed**
- **Drill targets identified**

Alamar Resources Ltd (Alamar) is pleased to provide an update on exploration at its Mandilla Well project.

#### Additional Exploration Licences staked

Exploration licences have been applied for in two areas close to the existing Mandilla Well claims (Figure 1). The first area lies 20km to the north and is interpreted to cover a magnetic lineament which trends through the Gourdis - Vause group of deposits owned by Newmont and forming part of their Nimery-Jundee operations. The second area covers the northern strike extent of the Corboys line of historic gold workings and includes the northern most workings along this trend. Both of the new tenements are within 20km of Alamar's existing tenure.

#### Geophysical processing and interpretation completed

Open file magnetic, radiometric and induced polarisation (IP) geophysical data have been obtained and processed to produce various filtered images and other products for interpretation. The interpretation of this data, in conjunction with the digitally compiled historic drilling and geochemistry databases, form the basis for generating new drill targets at Mandilla Well.

#### Drill targets identified

A number of targets have been identified and subject to field confirmation, Alamar intends to drill test these in the coming months.
